...and airshed.

# Five Towns

- Moose City
- Rabbit
- Hawk
- View
- Woods

# eco-Choices Game

- In this game, you will need to make decisions about problems in your town, which will affect certain ecosystem services as well as human health. You will also keep track of how much money you spend and whether the voters in your town approve of your decisions.
- You will get to see how other towns' decisions affect you via the watershed and airshed.
- Finally, you will need to develop a solution for greening your whole county.

# Ecosystem Services

All life depends on a large number of goods and services provided to us by ecosystems, for free. Some examples:

- Clean water
- Clean air
- Pollination
- Wood
- Flood control

In your town, when you make decisions, you affect these “ecosystem services”:

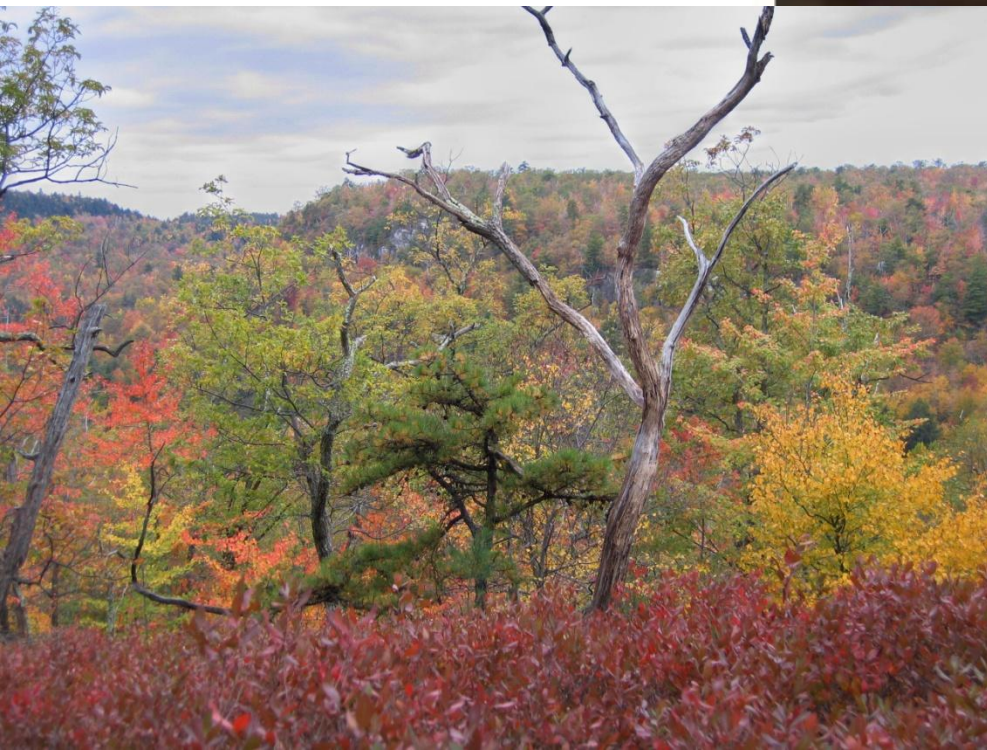

- Water quality
- Air quality
- Biodiversity

# Biodiversity

*All of the different plants, animals, microbes, and fungi that live on earth.*

What are some ways you might increase or decrease the biodiversity of a place?

# Air Quality

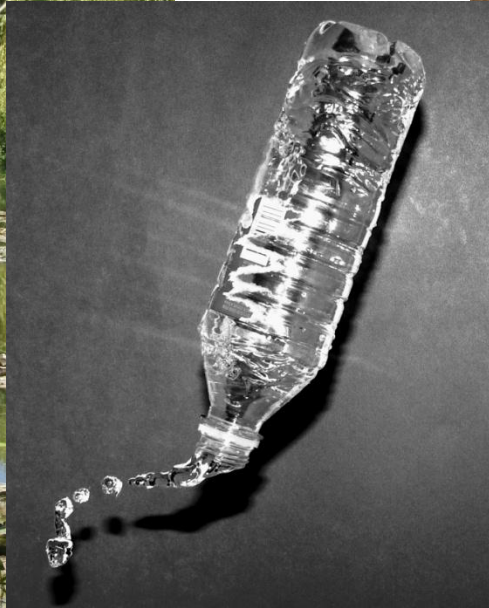

What are some ways you might make air quality better or worse?

# Water Quality

What are some ways you might make water quality better or worse?

# Human Health

How might changes to the environment affect people?
